

# SKILL AND JOB RECOMMENDER USING CLOUD APPLICATION DEVELOPMENT

## Problem Statement:

The Internet-based recruiting platforms become a primary recruitment channel in most companies. While such platforms decrease the recruitment time and advertisement cost, they suffer from an inappropriateness of traditional information retrieval techniques like the Boolean search methods. Consequently, a vast amount of candidates missed the opportunity of recruiting. The recommender system technology aims to help users in finding items that match their personnel interests; it has a successful usage in e-commerce applications to deal with problems related to information overload efficiently.

1. What are the problems of the recommender?	<b>1. Lack of data capability.</b> <b>2. Worries about job security and career.</b>
2. Why would a job be rejected?	<b>1. Lack of required skills.</b> <b>2. No proper information in the uploaded profile.</b> <b>3. Problems with recommendation and other relationships.</b>
3. What methodology can be used to solve the recommender issue?	<b>1. Quick response to the recommender.</b> <b>2. Contacting the recommender and seeking for a considerable solution.</b>
4. Why is it important to solve the recommender's problem?	<b>For complete satisfaction and creating good impression to the recommender.</b>

5. What are the challenges faced by the job seekers in the industries?	<b>1. Searching for appropriate job.</b> <b>2. Heavy competition.</b> <b>3. Hiring challenges.</b> <b>4. Challenges after receiving the recommendation letter.</b>
6. How could we deal with employee issues?	<b>1. Identify the cause of the problem.</b> <b>2. Open feedback on the situation.</b> <b>3. Give clear vision.</b>
7. What are the barriers for job opportunity?	<b>Lack of employment opportunities.</b>
